

ePAN® BUN PANS

CHICAGO METALLIC ITEM #42425, #42435, & #42445 & #42495

BUNDY

Chicago
Metallic

Chicago Metallic ePAN® Bun Pans are manufactured from high tensile strength aluminized steel which produces a pan that is thinner and lighter, yet substantially stronger than traditional pans.

BAKING CHALLENGES

Employee safety and pan longevity are two very important concerns for every baking operation. Imagine a product that is safer for employees to handle, lasts longer than traditional pans, and can reduce energy consumption and you have a product worth talking about.

BAKING SOLUTIONS

Energy Efficient – ePAN® uses a thinner gauge but higher tensile strength aluminized steel that allows the pan to heat up and cool down faster, resulting in reduced energy cost.

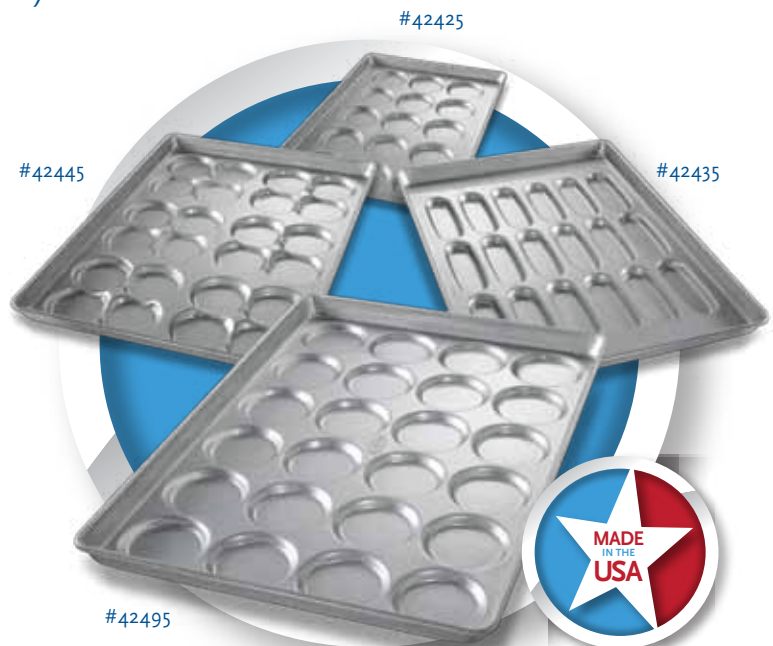

Ergonomically Sound – The lighter weight ePAN® – weighing up to 25% less than a traditional pan – makes handling more manageable and less stressful for employees.

Environmentally Sensible – ePAN® requires a substantially lower volume of raw material resulting in less resource consumption.

Extended Pan Life – The high tensile strength of ePAN®'s aluminized steel minimizes the potential for pan damage.

Exceptional Release Properties – We can supply ePAN® bun pans with either of our unique, proprietary AMERICOAT® Plus or DuraShield® coatings... delivering hundreds, even thousands, of trouble free releases.
