

Trough Collector

Job: _____ Item No.: _____

Model S419

A Trough Conveying and Food Waste Collecting System

Widely accepted in areas that restrict the use of food waste disposers.

Recirculated Water used for scrapping typically reduces water and sewer costs dramatically. The Trough Collector consumes only 2 gallons of new water per minute.

Trough Water Velocity with the Trough Collector is 70 gallons per minute. This velocity swiftly propels food waste down the trough and into the Collector with no additional hand movement, leaving both hands free for high-volume scrapping. The Trough Collector will let you keep up with large conveyor or flight dishmachines.

Design Flexibility is offered by the Collector as troughs can turn one or more corners and have wider troughs for soaking problem dishes.

Wider and Longer Troughs can be designed because of the Collectors high water velocity which allows you to soak problem dishes or add gusher heads to pre-rinse compartmental trays.

TYPICAL INSTALLATIONS

MSS-LD Control

The MSS-LD control can be mounted on either side of the Collector with existing fasteners, mounting holes and wiring for left or right hand operation.

#980104 MSS-LD Mounting Bracket

The control can be mounted remotely using optional mounting bracket.

Note: additional field wiring is necessary.

Remote Mounting of MSS-LD Control

Upon request, the Collector top may be shipped separately to an alternate location for fabrication.

2" TANK DRAIN
(Piping not furnished)

ALL CONNECTIONS ARE TO BE MADE BY QUALIFIED PERSONNEL WHO WILL OBSERVE ALL LOCAL AND NATIONAL CODES.

The Trough Collector top can be rotated in 15 degree increments to ease common installations as well as improve design flexibility without the need of costly tank modifications.
